JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

A Series of Base Maps and Graphs

Prepared by J. PAUL GOODE
Professor of Geography in the
University of Chicago

THESE maps are accurate in detail, of highest quality in drawing, being superior to most maps used in books and magazines. They are printed on a fine quality of paper and give excellent results with colored pencil, water color, or ink. Maps come in five sizes from one and one-half to forty cents each.

Starved Rock State Park and Its Environs

By CARL O. SAUER
Department of Geology, University of Michigan
GILBERT H. CADY
Illinois State Geological Survey
HENRY C. COWLES
Professor of Ecology, University of Chicago

This thorough and interesting geographical study of the best-known feature of the Illinois Valley has been prepared for the benefit of those who are interested in knowing more about the region than can be gathered by personal observation in a few hours or a few days spent in the park. The physical geography of the park and its surroundings has a number of features, such as the beautiful little canyons, which are unusual in this part of the country. Part I is given up to the geography of the park, its surface features and their origin, and the exploration, settlement, and development of the region; Part II, to the geology of the park; and Part III, to its botany.

130 pages, cloth, \$2.00, postpaid \$2.15

The Geology of Vancouver and Vicinity

By
EDWARD M. J. BURWASH

14 half-tones, 10 line drawings, and 2 colored maps

A thorough and authoritative survey of the region, made more interesting by the remarkable photographs, which include a profile of the Grouse Mountain spur, the Lions from Mount Brunswick, a view of Red Mountain from Black Tusk Mountain, Mount Garibaldi from the south, a glacial section from a cutting on Keith Road, and others equally interesting. One colored map shows the topography of Vancouver range and the other is a geological map of Vancouver and vicinity.

112 pages, paper covers; \$1.50, postpaid \$1.60

The Geography of the Ozark Highland of Missouri

By CARL ORTWIN SAUER, the University of Michigan

(Publications of the Geographic Society of Chicago)

The Ozark Highland of Missouri was selected for investigation because of its unusual wealth of geographic responses and because little is known concerning its conditions and possibilities.

The purpose of such a study is twofold: to furnish an adequate explanation of the conditions of life in a given area, and to contribute proved statements which will aid in working out fundamental principles.

The book is divided into three parts. The first is an outline of the environment. Only those things which are pertinent to an understanding of the conditions under which the people live are introduced.

The second part considers the influence of environment on the settlement and development of the different parts of the highland.

The third part is a study of the economic conditions as they exist today. In conclusion a forecast is offered of the lines along which the future of the region will be worked out.

A valuable feature of the volume is the 44 figures in the text and 26 plates.

xviii+246 pages, 8vo, cloth; \$3.00, postpaid, \$3.20
